

**SYSTEM, APPARATUS, AND METHOD FOR PROVIDING  
WEB SERVICES USING WIRELESS PUSH**

5

**ABSTRACT**

The present disclosure is directed to a system, apparatus, and method for providing Web services from a mobile device. In one arrangement, a mobile device is coupled to a server over a wireless network. The mobile device includes a Web services processing module and can receive a server-initiated data push. This data push can be implemented using a (WAP) Connection-Oriented (CO) Over the Air (OTA) push. A transport protocol can be bound to the data push, and a Web service message sent to the mobile device via the server initiated data push using the transport protocol. The mobile device can then process the Web service message and provide a response via the server initiated data push, if needed.
